

Quickstart

You can start using Penpot right in your browser or installing it in a server of your own.

In the browser

To use Penpot online point your browser to design.penpot.app and start designing. Use the latest Google Chrome or Mozilla Firefox for the best experience. We also provide specific support to WebKit (Safari / Epiphany).

You simply go to penpot.app and click on the Signup button. You will be asked to create an account. We only ask for an email. There are some authentication providers available, too.

On my own server

Current private Penpot instances are only requiring basic Docker knowledge.

You can run your own Penpot server following the instructions at the [Technical Guide](#)
